

Liquidity Risk Services: Implementation

According to the Basel Committee on Banking Supervision, the implementation of Liquidity Risk regulations

“ should be tailored to the size, nature of business and complexity of a bank’s activities ”

Implementation is a service supplied to financial institutions requiring successful deployment of a Liquidity Risk Management vendor-supplied system. **Implementation** services include support in RFI and RFP as well as the precise skills necessary for delivering vendor applications. We are a most unusual consultancy since we combine an offering of regulatory, methodology and technology services under one roof. We are experts in the successful delivery of Liquidity Risk Management Systems.

How to be smart about Liquidity Risk

One of Pelican’s recent White Papers offered suggestions on how to be smart about Liquidity Risk. Our main recommendation is to avoid underestimating the scale of the challenge. Selection of a vendor application can assist in reducing project risk, however, implementing any application requires significant effort in terms of data management, development (to cover gaps in any supplied solution) and testing. Pelican can assist you to be effective and successful in the conception, management and delivery of a Liquidity Risk Management system project.

Experienced team

Pelican has an established track record of delivery in the area of Liquidity Risk. Whether the job requires bespoke software or the implementation of vendor software, similar challenges await which Pelican can address using its expertise and its practical experience. Why not start your project with a team on your side which has already successfully delivered similar systems?

Implementation is an expert-led, effective service for CIOs, Heads of Treasury and Senior Liquidity Risk Managers considering significant investment in Liquidity Risk Management Systems. **Implementation** is frequently used in conjunction with other Pelican services including **Blueprint** (which will assist you in scoping the solution you require) and **Prototype**.
